Version	Changes
V1	Added feedback from test users

## Introduction

After development of my web application, I wanted to put it through a field test with random users in order to gain feedback, which lets me know where I can improve in the user interface of the application.

This document will handle the thoughts of the users which have tested this application, and also my thoughts on this feedback and how I plan to implement/take it into account in further development. The names of the users have been withheld because they did not wish for me to add it.

## Feedbacks

### Micheal

Task	Feedback
Navigation from home screen	"It was easy to navigate through the website. I feel it is also good that I can go to homepage by clicking the logo."
Registering an account	"It was easy to register my account, and also good that I received a notification."
Login into account	"Logging into the account was easy, and good that I received a notification"

Adding Product	"Pretty straight forward"
Deleting Product	"It was easy to delete the product, but I had to refresh the page to see this."
Editing Product	"Updating a product was straight forward."
Admin Board	"I like the admin board, it really nice that not everyone can access the admin board."
Website Design	"Overall I think it was a nice design. But it would be nice if you change the way the list of products look, and maybe the login form."

Cristin

Task	Feedback
Navigation from home screen	"Navigation was ideal and straight forward."
Registering an account	"It was easy to register my account."
Login into account	"Log in was easy."
Adding Product	"It was easy to add a product"
Deleting Product	"Deleting was straight forward."
Editing Product	"It was easy to update a particular product."
Admin Board	"The admin board is cool, and I like that not every user can see it in their navbar."
Website Design	"Overall I think it was a nice design.."

## Reflections

I feel like I received a rather positive feedback from my test users, they agree that my website is easy to navigate through, and that it was good that they received notifications when certain tasks are completed. It was mentioned that I could change the way my list of products look and as well as my login form design, I will take these into account when updating my website.
